

HI-TRAC MC GANG CHARGER

The HI-TRAC® MC Gang Charger provides a convenient way to charge a multiple number of any of the MC Series handheld traffic data loggers (MC10, MC11 MC12 or MC36).

The charger incorporates automatic full charge detection and will switch to a trickle charge thus batteries cannot be overcharged if left connected to the charger.

Up to six individual MC type units can be connected at any one time and the charger will fully charge a discharged MC unit in approximately 4 hours.

The charger incorporates a switched mode power supply and will accept AC mains input 100-230V 50/60 Hz. An integral fuse is incorporated in the rear mains connector.

Main Features

- Up to 6 MC type handheld traffic data loggers charged at the same time
- Full Charge 0.75A: Trickle charge 100mA
- Fully charges a discharged MC unit in 4 hours
- Automatic full charge detection
- Universal AC input 100-230VAC 50/60Hz
- Thermally controlled cooling fan
- Thermal protection to prevent overheating with automatic disconnect function
- Two indicator LED's; RED during full charge and GREEN during trickle charge
- Batteries can not be overcharged if left connected to the charger
